

Name: Olatimilehin Majesty Oluwakolade

Matric Number: 240502090

Course: IFT203

Purpose: Week 3 Assignment

Department: Computer Science

QUESTIONS

Section A: Short answer questions

1. What is the difference between a tag and an element?
2. Explain the purpose of the alt attribute in an image tag
3. Write the basic structures of an HTML 5 document?
4. What are semantic elements and why do we use them?
5. Three Give examples of three paired and unpaired HTML tags.?
6. What are the other versions of HTML and their syntaxes?

Section C:

Create a simple web page titled "MY Profile" containing:

1. Your name(use <h1>)
2. A picture of yourself (use a placeholder if unavailable)
3. A short biography
4. A list of your three hobbies.
5. A table containing your course schedule for a week.
6. A footer saying " This page was created for IFT 203- Week3"
7. Save your file as my_profile .html and submit.

ANSWERS

Section A

1. What is the difference between a tag and an element?

- A **tag** is the markup symbol used to define the start or end of an element (e.g., <p>, </p>,).
- An **element** is the complete structure that includes the opening tag, content, and closing tag (when required). Example: <p>This is a paragraph.</p> → <p>...</p> is the **element**, <p> and </p> are **tags**.

2. Explain the purpose of the alt attribute in an image tag

The alt attribute provides **alternative text** for the image. Its purposes are:

- Displayed if the image fails to load
- Read by screen readers for visually impaired users (accessibility)
- Used by search engines for SEO Example:

3. Write the basic structure of an HTML5 document?

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<meta charset="utf-8">
```

```
<title>Document Title</title>
```

```
</head>
```

<body>

<!-- Content goes here -->

</body>

</html>

4. What are semantic elements and why do we use them?

Semantic elements clearly describe their meaning to both the browser and the developer. Examples: <header>, <nav>, <main>, <article>, <section>, <aside>, <footer> **Benefits:**

- Better accessibility (screen readers)
- Improved SEO
- Easier to read and maintain code

5. Give examples of three paired and three unpaired HTML tags Paired tags (have opening and closing):

- <p></p>
- <h1></h1>
- <div></div>

Unpaired / Self-closing tags:

- or
-
 or

- <hr> or <hr />

6. What are the other versions of HTML and their syntaxes?

- HTML 1.0 (1993) – First version
- HTML 2.0 (1995) – RFC 1866
- HTML 3.2 (1997)
- HTML 4.01 (1999) – Widely used, strict/transitional/frameset
- XHTML 1.0 (2000) – HTML rewritten as XML (strict syntax: all lowercase, all tags closed, attributes quoted)
- HTML5 (2014–present) – Current standard Key differences in HTML5:
 - <!DOCTYPE html> (simpler doctype)
 - New semantic tags
 - Built-in support for audio, video, canvas, etc.

Section C

1. Code is pasted below directly from VS Code, file is also uploaded separately as the limit is one upload per submission (as of now) in the submission link

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <title>MY Profile</title>
  <style>
    th, td {padding:10px; border: 1px solid black;}
```

```
</style>
</head>
<body style="font-family: Arial; margin: 20px;">

    <h1>Majesty Olatimilehin</h1>
```

```
    
```

```
    <h2>About Me</h2>
    <p>
        Hello! My name is Majesty Olatimilehin and I am a student of Crawford University with matric number 240502090 taking IFT 203 - Introduction to Web Development.
        I enjoy learning new technologies and building creative projects. I am passionate about programming, design, and problem-solving.
    </p>
```

```
    <h2>My Hobbies</h2>
    <ul>
        <li>Music</li>
        <li>Contortion</li>
        <li>Social Media</li>
    </ul>
```

```
    <h2>Weekly Course Schedule</h2>
    <table>
        <tr>
            <th>Day</th>
            <th>8-10 AM</th>
            <th>10-12 PM</th>
            <th>12-2 PM</th>
            <th>2-4 PM</th>
        </tr>
        <tr>
            <td>Monday</td>
            <td></td>
            <td></td>
            <td></td>
            <td></td>
        </tr>
        <tr>
            <td>Tuesday</td>
