

CRAWFORD UNIVERSITY, IGBESA, OGUN STATE
COLLEGE OF NATURAL AND APPLIED SCIENCES (CONAS)
DEPARTMENT OF COMPUTER SCIENCE
REPORT
ON
THE STUDENT INDUSTRIAL WORK EXPERIENCE SCHEME (S.I.W.E.S)
HELD AT

OPEARE GLOBAL COMMUNICATION
FENCE B/STOP AYETORO ITELE, OGUN STATE
(IT SUPPORT).
SUBMITTED BY
OKEKE EVIDENCE CHINEMEREMU
240502113
TO
THE DEPARTMENT OF COMPUTER SCIENCE AND TECHNOLOGY,
CRAWFORD UNIVERSITY IN PARTIAL FULFILMENT OF THE REQUIREMENTS
FOR CSC 299
FROM: 7TH JULY, 2025 – 26TH SEPTEMBER, 2025.

DEDICATION

It gives me immense joy to dedicate this SIWES report to the almighty God, whose love, compassion strength and grace have brought me this far in my academic endeavor despite the difficulties and challenges.

I also dedicate this report to my parents, family, and all those who have supported me throughout my academic journey. Their guidance, encouragement, and prayers have inspired me to work hard and complete this industrial training successfully.

ACKNOWLEDGEMENT

I sincerely acknowledge the Industrial Training Fund (ITF) and Crawford University for providing me with the opportunity to participate in the Student Industrial Work Experience Scheme (SIWES). I also thank the management and staff of **Opeare Global Communications** for their guidance, support, and mentorship throughout my three months of industrial training. Finally, I appreciate my supervisor for their invaluable advice, encouragement, and for monitoring my activities during the training period.

I also want to thank my SIWES coordinator for her effort in seeing that this work saw the light of the day. May the lord graciously bless you all.

CERTIFICATION

This is to certify that **OKEKE EVIDENCE** with Matriculation number **240502113** from the DEPARTMENT of **COMPUTER SCIENCE** in the **COLLEGE OF NATURAL AND APPLIED SCIENCES** at **CRAWFORD UNIVERSITY** prepared and submitted this student industrial work experience scheme {SIWES} report upon the completion of my industrial training at **OPEARE GLOBAL COMMUNICATION**.

TABLE OF CONTENT

- Cover Page
- Dedication
- Acknowledgement
- Certification
- Table of content
- Abstract

CHAPTER ONE: BACKGROUND KNOWLEDGE OF SIWES

- 1.1 About SIWES
- 1.2 Scope of SIWES
- 1.3 Aim and objectives of SIWES.
- 1.4 Benefits of SIWES

CHAPTER TWO: INDUSTRIAL WORK EXPERIENCE

- 2.1 History and Background Knowledge of the Attached Organization
- 2.2 Organization Objectives and Scope of Service
- 2.3 Organogram of the Attached Organization
- 2.4 Experience gained during industrial training

CHAPTER THREE: SKILLS ACQUIRED AND PROBLEMS ENCOUNTERED

- 3.1 Technical skills acquired.
- 3.2 Social and functional skills acquired.
- 3.3 Challenges Encountered

CHAPTER FOUR: SUMMARY, CONCLUSION AND RECOMMENDATIONS

4.1 Summary of Attached Activities

4.2 Conclusion

4.3 Reference

ABSTRACT

This report provides a comprehensive account of my three (3) months industrial training at **Opeare Global Communications** under the Student Industrial Work Experience Scheme (SIWES).

The training exposed me to practical aspects of Information Technology, including system installation, computer maintenance, networking, software installation, graphics design, customer service, and data management

.

This report also talks about the technical and character development learned during the span of three (3) months of internship.

CHAPTER ONE: BACKGROUND KNOWLEDGE OF SIWES

1.1: BACKGROUND KNOWLEDGE OF SIWES

The understudy Modern Work Experience Plan {SIWES} otherwise called modern preparation is an obligatory ability preparing program intended to uncover and prepare understudies at Nigerian colleges, polytechnics, universities of Training, Schools of innovation, Schools of Farming for modern work circumstances they will experience after graduation. SIWES is an adequate ability program, which is essential for the supported least scholastic norm in the different degree programs for every single Nigerian college. The plan aims to close the gap between Nigeria's tertiary institutions' professional education programs in agriculture, medical science (including nursing), engineering and technology, management, and information and communication technology.

1.2 SCOPE OF SIWES:

The program is aimed at providing students with the opportunity to become acquainted with and exposed to necessary experience in managing equipment, facilities, and machinery that are typically not available at their institutions. It also assists in building the student's work relationships and ethics in a work environment.

SIWES was founded in 1973 by the ITF [industrial training funds] to address the problem of tertiary institution graduates without enough industrial skills and working experience for employment in Nigerian industries. This program gives student the opportunity to blend their theoretical knowledge acquired in the classroom with practical hands-on application of knowledge required to perform work in the industry. Also, it prepares me for the world of work after graduation.

Different institutions have different SIWES durations. The university period begins at the end of the 300 and 400 level of a year of the two-year ND programs and lasts for six (6) months. At the end of the first year of the two-year ND program, polytechnics, Monotechnic and colleges of technology commence a four-month SIWES program. While the colleges of education start their four-month SIWES program at the completion of the second year of the three-year NCE program.

1.3 AIMS AND OBJECTIVES

SIWES is a skilled acquisition strategy. It is intended to prepare and expose students from universities, polytechnics, and schools of education to real-life employment situations they would face after graduation. As a result of that, SIWES is a critical factor in injecting and sustaining industrialization and economic development in the country through the introduction and practical training of scientific and technological skills to students. The industrial work experience scheme includes the following targets:

1. Allows students in higher institutions to develop industrial skills and experience as part of their studies.
2. Prepare students for the industrial work environment they would likely encounter after graduation.
3. It gives the student a glimpse of the corporate working environment including policies, and work ethics, and establishes communication skills with co-workers.
4. Exposing students to work methods and approaches for handling equipment and machinery that might not be available in their school.
5. Make the transition from school to work smoother and increase student contact for future job placements.
6. Closing the gap between theories and practice by offering a way for students to apply academic information to real-world job circumstances.
7. Introduce students to real-world job environments so that they can foresee what they will encounter after graduation.

1.4 BENEFITS OF SIWES:

Some potential benefits of the student's industrial work experience scheme (SIWES) include.

1. **PRACTICAL EXPERIENCE:** SIWES offers students the opportunity to gain practical experiences in their field of study, allowing them to apply the knowledge gained in the classroom to real-world situations. This helps them to bridge the gap between theory and practice, enhancing their understanding of the subject matter.
2. **SKILL DEVELOPMENT:** SIWES provides students with the chance to refine their technical and professional skills. They can learn new technical and professional skills. They can learn new techniques, tools, and methodologies that are relevant to their chosen profession, making them more competitive in the job market.
3. **NETWORKING OPPORTUNITIES:** Through SIWES, students have the chance to interact and network with professionals in their field. This can lead to future job opportunities, references, and mentorship, helping them Build a professional network while still in school.
4. **PERSONAL DEVELOPMENT:** SIWES allows students to develop and improve various personal attributes, such as problem-solving skills,

time management, teamwork, and communication skills. These skills are not only beneficial in their chosen profession but also in various aspects of life.

5. **EMPLOYABILITY:** By participating in SIWES, students gain valuable work experience that enhances their employability upon graduation. Employers often prefer candidates with practical work experience, and SIWES can provide students with an edge in the job market.
6. **CAREER EXPLORATION:** SIWES enables students to explore different career options within their field of study by exposing them to various organizations and industries. This can help them make more informed decisions about their career path and potential areas of specialization.
7. **SELF-CONFIDENCE:** By successfully completing a SIWES program, students can gain a sense of accomplishment and increased self-confidence. This can motivate them to further pursue their career goals and take on new challenges.
8. **INDUSTRIAL HEIGHTS:** SIWES exposes students to the inner workings of different industries, providing them firsthand knowledge of industrial standards, practices, and trends. This can help them stay updated with the latest developments and prepare them for the demands of the industry.

CHAPTER TWO: INDUSTRIAL WORK EXPERIENCE

2.1 History and Background Knowledge of the Attached Organization

Opeare Global Communications is an Information and Communication Technology (ICT) service-oriented organization that provides a wide range of computer-related and digital services to individuals, students, and small business owners. The organization was established to meet the growing demand for ICT solutions in areas such as computer maintenance, internet services, printing, documentation, and basic networking.

Over the years, Opeare Global Communications has evolved from a small business center into a functional ICT support hub where customers can access essential computer and internet-related services. The organization operates in a fast-paced environment due to the high volume of customers seeking services such as online registrations, system repairs, document editing, and graphic design.

During my industrial training, I observed that the organization places strong emphasis on customer satisfaction, timely service delivery, and practical problem-solving. The work environment encouraged learning through hands-on practice, observation, and interaction with experienced personnel. This environment provided me with a solid foundation to understand real-world IT operations beyond theoretical classroom knowledge.

The organization also serves as a training ground for students on industrial attachment, thereby contributing to human capacity development in the ICT sector. This role aligns with national objectives of skill acquisition and youth empowerment through practical training programs such as SIWES.

2.2 Organizational Objectives and Scope of Service

The primary objective of Opeare Global Communications is to provide reliable, affordable, and efficient ICT services to its customers. The organization strives to bridge the digital gap by making computer and internet services accessible to students, businesses, and the general public.

The specific objectives of the organization include:

- Delivering quality computer maintenance and repair services.
- Providing fast and reliable internet access and online registration services.
- Offering document processing services such as typing, printing, photocopying, and scanning.
- Supporting customers with graphic design services including business card design and document formatting.
- Training individuals and students in basic computer operations and ICT skills.

The scope of services rendered by the organization covers both technical and non-technical ICT activities. These include system installation and formatting, software installation, virus removal, basic networking, data backup, customer support, and office documentation services. This wide scope allowed me to gain exposure to multiple aspects of Information Technology during my industrial training.

2.3 Organogram of the Attached Organization

The organizational structure of Opeare Global Communications is designed to promote efficiency, teamwork, and effective service delivery. At the top of the structure is the Managing Director, who oversees the general operations of the organization and makes key administrative and strategic decisions.

Directly under the Managing Director is the Operations or IT Supervisor, who coordinates daily technical activities and supervises staff and trainees. The technical staff are responsible for system maintenance, networking, software installation, and troubleshooting. Supporting the technical unit are administrative and support staff who handle customer relations, documentation, and office management.

As an industrial trainee, I worked under the supervision of the IT personnel and interacted closely with both technical and administrative staff. This structure enabled proper supervision, knowledge transfer, and effective communication within the organization.

2.4 Experience Gained During Industrial Training

The experience I gained during my three (3) months industrial training at **Opeare Global Communications** was extensive and highly valuable to my academic and professional development. The training period exposed me to real-life IT operations and allowed me to actively participate in day-to-day activities within the organization. This experience helped bridge the gap between theoretical knowledge acquired in the classroom and practical application in a real work environment.

One of the major areas of experience gained was in **computer system installation and maintenance**. I was involved in formatting desktop computers and installing different versions of the Windows operating system. During this process, I learned the correct procedures for disk partitioning, operating system installation, driver installation, and system configuration. I also assisted in cleaning computer systems, both internally and externally, to ensure proper functioning and longevity of the hardware components.

Another important experience gained was in **software installation and configuration**. I installed essential application software such as Microsoft Office packages, antivirus software, media players, and other utility programs. I learned how to troubleshoot software issues, resolve installation errors, and ensure that systems were properly optimized for users. This experience improved my understanding of software compatibility and system performance management.

I also gained hands-on experience in **customer service and office operations**. I attended to customers daily, responded to their inquiries, and assisted them with services such as typing, photocopying, scanning, and printing of documents. I edited customers' Curriculum Vitae (CVs), typed academic projects, and assisted with document formatting. These activities improved my communication skills, patience, and ability to work under pressure while maintaining professionalism.

During the training, I actively participated in **online registration and internet-based services**. I assisted customers with online registrations such as JAMB-related services and other form submissions. Through this, I learned how to navigate online portals, manage customer data carefully, and ensure accuracy during data entry. This experience enhanced my attention to detail and understanding of online service delivery.

I also gained valuable experience in **graphic design**. Using CorelDRAW, I designed business cards and edited visual materials for customers. This helped me develop creativity, basic design principles, and proficiency in using graphic design software. The experience further strengthened my interest in graphic design as a career path.

In addition, I was exposed to **basic networking activities**. I participated in simple Local Area Network (LAN) setups and assisted in network cable connections. I learned about IP addressing and basic network configuration, which introduced me to the fundamentals of computer networking and data communication.

Another area of experience gained was in **data management and security**. I performed data backup operations using external storage devices to prevent data loss. I also observed the use of antivirus software and firewalls in protecting computer systems from malware and unauthorized access. This experience emphasized the importance of data security and system protection in IT environments.

Furthermore, I gained experience in **hardware maintenance and upgrades**. I assisted in replacing faulty keyboards, upgrading system memory (RAM), and identifying common hardware faults. These activities improved my understanding of computer hardware components and troubleshooting techniques.

Throughout the training period, I was also involved in **supporting IT training activities**. I assisted in training computer students by helping them understand

basic computer operations and software usage. This experience improved my confidence, teaching ability, and leadership skills.

I also participated in **monitoring system performance and reporting faults**. I learned how to identify system issues, report them appropriately, and assist in resolving them under supervision. In some cases, I was sent on errands to obtain equipment and materials needed for system maintenance, which exposed me to procurement processes and responsibility handling.

Overall, the experience gained during my industrial training was comprehensive and impactful. It exposed me to various aspects of Information Technology, improved my technical and interpersonal skills, and prepared me for future professional challenges in the field of Computer Science.

CHAPTER THREE: SKILLS ACQUIRED AND PROBLEMS ENCOUNTERED

3.1 Technical Skills Acquired

During my industrial training at **Opeare Global Communications**, I developed a wide range of technical competencies that go beyond merely carrying out tasks. These skills represent knowledge, understanding, and the ability to independently apply Information Technology concepts in real-life situations. The training transformed many theoretical concepts I had learned in the classroom into practical skills that I can confidently apply.

One major technical skill I acquired was **proficiency in computer system deployment and configuration**. Rather than just installing operating systems, I developed the ability to understand system requirements, prepare storage devices, and configure systems to meet user needs. I gained confidence in handling system setup processes independently and ensuring that systems were stable, responsive, and ready for productive use.

I also developed strong competence in **software management and troubleshooting**. This included understanding how different software applications interact with the operating system, identifying installation conflicts, and resolving common software errors. Through repeated exposure, I learned how to diagnose software-related problems and apply appropriate solutions without relying solely on supervision.

Another critical skill I acquired was **basic hardware diagnostics and maintenance**. I learned how to identify faulty components, understand the functions of internal hardware parts, and determine appropriate corrective actions. This skill improved my logical thinking and enhanced my ability to approach technical problems systematically rather than through trial and error.

My training also strengthened my understanding of **basic networking principles**. I gained practical knowledge of how computers communicate within a Local Area Network (LAN), the role of IP addresses, and how network connectivity supports information sharing. This foundational networking knowledge improved my overall understanding of system interconnectivity and data communication.

In the area of **data management and system security**, I developed awareness of the importance of protecting digital information. I learned how to apply data backup strategies, recognize security threats, and appreciate the role of antivirus software and firewalls in maintaining system integrity. This skill enhanced my sense of responsibility in handling user data and system resources.

I also acquired technical competence in **digital documentation and basic graphic design**. Beyond using applications, I developed efficiency in document formatting, structured data entry, and simple visual design principles. This improved my ability to present information clearly and professionally using tools such as Microsoft Word, Excel, and CorelDRAW.

Overall, the technical skills acquired during my industrial training contributed significantly to my professional growth. They enhanced my confidence, independence, and readiness to handle real-world IT challenges. These competencies form a solid foundation for my future academic advancement and career development in Computer Science.

3.2 Social and Functional Skills Acquired

In addition to technical competence, my industrial training significantly improved my social and functional skills, which are essential for effectiveness in any professional environment. These skills were developed gradually through consistent interaction with customers, colleagues, and supervisors, and through adaptation to the organizational work culture.

One of the most important social skills I developed was **professional communication**. I learned how to communicate clearly, respectfully, and confidently with customers and colleagues. This included listening attentively to customer requests, asking relevant questions for clarification, and providing appropriate responses in a polite and professional manner. Over time, this improved my confidence and ability to express myself effectively in a work setting.

I also developed strong **customer relationship and service skills**. Working in a customer-oriented environment taught me how to manage different types of customers, including those who were impatient or confused. I learned how to remain calm, patient, and courteous while ensuring that customers' needs were

met satisfactorily. This skill helped me understand the importance of customer satisfaction in business success.

Another key functional skill acquired was **teamwork and collaboration**. I worked closely with other staff members and learned how to cooperate, share responsibilities, and support team efforts. This experience helped me appreciate the importance of collective contribution and mutual respect in achieving organizational objectives.

The training also enhanced my **time management and organizational skills**. I learned how to plan my daily activities, prioritize tasks based on urgency, and complete assignments within stipulated timeframes. This improved my efficiency and ability to handle multiple responsibilities in a busy work environment.

Furthermore, I developed **adaptability and workplace discipline**. Adjusting to a professional environment required adherence to rules, punctuality, and a responsible attitude toward assigned duties. Over time, I became more disciplined and adaptable, which positively influenced my work performance.

Overall, the social and functional skills acquired during the training improved my interpersonal relationships, work ethics, and readiness for future professional challenges.

3.3 Challenges Encountered

During the course of my industrial training, I encountered several challenges that tested my adaptability, resilience, and willingness to learn. These challenges, although demanding, contributed significantly to my personal and professional development.

One major challenge I encountered was **limited equipment and resources**. In some situations, the available computer systems and tools were insufficient to meet the high demand from customers. This required patience, proper coordination, and efficient task management to ensure that work was completed without compromising service quality.

Another challenge was **handling high customer traffic**, especially during peak periods. Managing multiple customers simultaneously while maintaining

professionalism was initially difficult. However, this experience improved my multitasking abilities, efficiency, and ability to work effectively under pressure.

I also faced challenges related to **unfamiliar technical tasks**. Some technical activities were new to me and required additional learning and practice. To overcome this, I engaged in personal research, sought guidance from experienced staff, and learned through observation and repetition. This approach helped me build confidence and improve my technical competence.

Adapting to the **professional work environment** was another challenge. Understanding workplace expectations, maintaining punctuality, and adhering to organizational rules required discipline and adjustment. With time, I adapted successfully and became more confident in handling responsibilities independently.

Despite these challenges, the experience was highly rewarding. Each challenge provided an opportunity for growth, improved my problem-solving skills, and strengthened my confidence. Overall, the challenges encountered during the training played a vital role in preparing me for future professional responsibilities in the field of Computer Science.

CHAPTER FOUR: SUMMARY, CONCLUSION AND REFERENCES

4.1 Summary of Attached Activities

This chapter provides a general summary of the activities I carried out during my three (3) months Student Industrial Work Experience Scheme (SIWES) at Opeare Global Communications. The industrial training was an eye-opening experience that exposed me to the practical realities of the Information Technology field and allowed me to actively participate in day-to-day organizational operations.

During the training period, I was involved in various computer-related activities that enhanced my technical understanding and practical competence. These activities included computer system installation and formatting, installation of operating systems and application software, basic hardware maintenance, and troubleshooting of system faults. Through repeated practice, I became more confident in handling computer systems and understanding how different components work together.

I also participated actively in customer-oriented services. I attended to customers by assisting with typing, printing, photocopying, scanning, and editing of documents such as Curriculum Vitae (CVs) and academic projects. In addition, I assisted customers with online registrations and internet-based services. These activities helped me understand the importance of accuracy, confidentiality, and professionalism when dealing with customer information.

Another important aspect of my training involved basic graphic design and documentation. I used CorelDRAW to design simple business cards and edit visual materials for customers. I also worked with Microsoft Word and Excel for document preparation, data entry, and basic record keeping. These activities improved my efficiency and ability to present information in a clear and professional manner.

Furthermore, I gained exposure to basic networking and data management practices. I assisted in simple Local Area Network (LAN) setups, learned about network cable connections, and gained basic knowledge of IP addressing. I also

performed data backup operations using external storage devices and observed system security practices such as the use of antivirus software and firewalls.

In addition to technical activities, I supported IT training sessions by assisting in the training of computer students. I also monitored system performance, reported faults when necessary, and carried out errands related to equipment procurement. These responsibilities helped me develop a sense of responsibility, initiative, and reliability.

Overall, the activities carried out during my industrial training provided me with practical exposure to the IT profession, improved my confidence, and strengthened my readiness for future academic and professional challenges.

4.2 Conclusion

The Student Industrial Work Experience Scheme (SIWES) undertaken at **Opeare Global Communications** was a highly impactful and rewarding program that contributed significantly to my academic, technical, and personal development. The training provided me with the opportunity to apply theoretical concepts learned in the classroom to real-life work situations, thereby bridging the gap between theory and practice, which is the core objective of the SIWES program.

Throughout the three (3) months of industrial training, I was exposed to a professional work environment where I learned the importance of responsibility, discipline, and dedication to duty. The hands-on experience I gained in areas such as computer system installation and maintenance, software management, basic networking, graphic design, customer service, and data security greatly improved my technical competence and confidence. These experiences helped me understand how Information Technology is applied in solving real-world problems and supporting business operations.

In addition to technical knowledge, the training enhanced my interpersonal and professional skills. I developed effective communication skills, learned how to work collaboratively with others, and improved my ability to manage time and handle tasks efficiently. Interacting with customers and colleagues helped me build confidence, patience, and professionalism, which are essential qualities for success in any career.

Overall, the SIWES program has prepared me for future academic and professional challenges in the field of Computer Science. The knowledge, skills, and experience acquired during this training have laid a solid foundation for my career development. I am confident that the exposure gained through this program will positively influence my future studies and professional pursuits. I therefore recommend that SIWES be sustained and further strengthened, as it plays a vital role in equipping students with practical skills required in today's technology-driven world.
